

Synthetic Table Fixture

This synthetic fixture exercises the structural-overlap filter: the comparison table below is rendered with per-cell background rectangles and no inter-column spanning rules, the canonical false-positive shape for vector extraction. Each column would naively cluster as its own vector image; the filter must drop them when the table detector identifies the region as a TABLE section.

Platform	Mode	Time (ms)	Score
LinuxX64	release	1234.5	9.10x
LinuxARM	release	987.1	10.40x
macOSX64	debug	2456.7	-
WindowsX64	release	1532.0	8.21x
FreeBSDX64	release	1801.2	7.55x
LinuxRISCV	release	3104.8	5.20x
macOSARM	release	856.4	11.92x
WindowsARM	debug	4291.3	-
LinuxX64	debug	2103.0	6.80x

The result above shows that even when the markdown contains a clean rendered table, the converter must not emit duplicate vector PNGs of each column.
